Minelab CTX 3030 with GPS

Brand: Minelab
Product Code: MLB-CTX3030
Availability: upon request

Price: Fr. 2195.00

Ex Tax: Fr. 2030.53

Short Description

The waterproof all-terrain CTX 3030 is the ultimate high performance treasure detector with integrated GPS.

Description

The CTX 3030 is a multi-frequency detector with integrated GPS and wireless audio options in a slim design. It is fully waterproof (to IP67) to 3 meters underwater! Choose between a compact 6" search coil (Standard) or large 17" search coil (Pro) as a free extra.

Integrated GPS module

You search, and the detector display shows all the target data you need to find more treasure - you won't miss a thing! With color display, iron and conductivity numbers, numeric depth display, and the sensitivity field, you have a better chance of finding well-hidden treasure even in places you've already searched or in areas with lots of junk.
GPS aids allow probes to navigate to a specific point and mark interesting spots along their path. With the CTX 3030, a separate handheld GPS unit is no longer needed. Navigation, recording of finds and mapping are now possible using GPSi technology and the XChange 2 application. Your world of discovery can now be easily managed on your PC. With XChange 2 you can store and retrieve a combination of find, detector and position data. This information can also be displayed in Google Maps. It's never been easier to accurately document your

sounding trips and plan your next treasure hunt.

FBS 2 Multifrequency

Uses multi-frequency transmission and sensor-to-detector data communication to find more objects in variable ground conditions.

XChange 2

Connecting the CTX 3030 to XChange 2 allows you to transfer data on WayPoints, FindPoints and GeoHunts from your and to your PC (an internet connection is required to view Google Maps). All your personal discovery data is stored locally and securely on your PC and is not accessible to third parties via the Internet. Add comments and photos to your discoveries and/or searches. Important discovery data can now be stored in one central location through a single PC application. You can categorize target types, color-code them on your maps, and arrange them in collection folders. You can create an unlimited database of your discovery data for later use.
Create new WayPoints to navigate when searching for new points of interest. Edit, rename, and download finds, detector settings, and location data to your CTX 3030 to support your next search. The versatility of XChange 2 knows no limits except your imagination. Evolve your game plan, track current treasure trends and identify potential treasure locations. You can also share your favorite detector settings and share interesting discoveries with friends. With XChange 2, you'll discover new possibilities for treasure hunting trips.

Waterproof

With this versatile metal detector, you can go exploring anywhere. The CTX 3030 is waterproof up to 3 m, giving you great flexibility to go treasure hunting on land or in the water.

Optimal FeCo discrimination

With target resolution by iron (Fe) and conductivity (Co), and adjustable tone detection profiles, you can better identify your desired targets and ignore the rest. With target tracking and target separation, you can detect multiple targets simultaneously and get accurate search results.

Multiple languages

You can choose from different menu languages: English, French, German,

Italian, Polish, Portuguese, Russian, Spanish or Turkish.

Wireless Audio

You can also use the detector without headphones connected. With the WM 10 wireless module, you can use the integrated speaker, the supplied headphones or your own headphones.

Ergonomic design

The design is very well balanced; the weight of the battery is fully behind the armrest, allowing you to hold it comfortably. The detector can be fully customized to meet your needs.

Package Content

- Minelab CTX 3030 Metal Detector
- 28 cm (11") waterproof DD searchcoil with coil protector
- Battery with charger
- Spare battery module
- Koss UR30 headphones, not wireless
- WM10 wireless module
- Minelab Software XChange 2 with USB cable
- User manual
- 2 years warranty

Specifications

Communication specs	
Communication Coil	Wireless FBS2 Multi Frequency
Display Unit	

Connection Display Unit > Headphones	Cable or with Wireless Audio Unit WM-10
Data transmission	USB Cable and Software included
Satellite Navigation	Built-in GPS with location data memory
Construction / technical data	
Battery level display	Yes, 3 Steps
Built-in Work Lamp	No
Dimensions LxWxD	Length 94cm - 140cm
Display type	Color LCD
Display with Backlight	Backlit LCD, 11 Steps
Keyboard Illumination	No
Operational Time with Battery	about 12 hours
Rechargeable Battery	LiPo 7.2 V, 4.7 Ah, 34 Wh
Weight	2.4 kg incl. DD-Coil 28cm
Environmental conditions	
Intended use	Professional
Leak tightness	Waterproof IP67 up to 3m
Temperature range	0 - 45° C
Conditions	
Software Updates available	Yes, over the Internet
Warranty	3 years by Minelab, Shipping Cost not included
Detection	
Channels per Frequency Band	
Detection depth large objects	up to 150 cm
Detection depth small objects	about 40 cm
Display of iron content in object	No
Display of the object conductance	Yes
Display of the object's depth position	Yes
Frequency Bands	1.5 - 100 kHz
Metal Search Frequency Ranges	ULF - VLF - LF (ultra low, very low and low frequency)
Notch filter	Yes
Pinpoint function	Yes

Search Coils	Waterproof DD-Coil 28cm / 11-Zoll
Search Modes	10, 5 voreingestellte (Coins, Beach, Relict, Silver & High Trash)
Search Sensitivity Adjustment	Yes, auto or 30 Steps
Simultan Multi Frequency Search	Yes, continous
Soil conductivity adjustment	Automatic
Suppression of unwanted conductance values	Yes
Tones for conductance	50 different tones
Vibration	No
